Abstracts

Virtual Evolved Packet Core (vEPC) is a framework for virtualizing the functions required to converge voice and data on 4G Long-Term Evolution (LTE) networks. VEPC moves the core network's individual components that traditionally run on dedicated hardware to software that operates on low-cost commercial off-the-shelf (COTS) servers. This growth is primarily due to the wide adoption of Virtualized EPC solutions across telco's, thereby generating demand for consulting services, implementation and deployment services, and training and support services.

The global Virtualized Evolved Packet Core (vEPC) market size was estimated at USD 7295.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 23.50% during the forecast period.
