Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Vision-Based Driver Monitoring System (DMS) competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Vision-Based Driver Monitoring System (DMS) is a real-time driver status monitoring solution based on computer vision technology. Using near-infrared cameras to capture facial images and deep learning algorithms to accurately analyze eyelid status, gaze direction, and head posture, the system employs feature point detection and spatiotemporal context modeling to effectively identify fatigue driving (e.g., persistent eye closure), distracted driving (e.g., frequent head lowering), and dangerous behaviors (e.g., holding phones). It sends warning signals to the vehicle's main control unit via CAN bus or Ethernet, significantly enhancing driving safety. The global vision-based DMS market size is approximately \$3,850 million USD in 2024, with annual installations of about 48.2 million units. The CAGR for the next five years is projected at 16.8%, with a market unit price of approximately \$80 USD per unit, per-line capacity of 600,000-1 million units, and industry gross margin generally ranging between 35%-42%.

The global Vision-Based Driver Monitoring System (DMS) market size was estimated at USD 3850.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 16.80% during the forecast period.
