Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Vision-Based Tactile Sensor for Robotics competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global Vision-Based Tactile Sensor for Robotics production reached approximately 292.8 k units with an average global market price of around US\$345 per unit. Single-line annual production capacity averages 5.5k units with a gross margin of approximately 31%. The upstream of the visuotactile sensor supply chain for humanoid robots encompasses precision optical components, special elastic materials, and microelectronic modules, concentrated in the fields of high-tech materials and precision instrument manufacturing. The midstream involves the design, integration, and testing of sensors, where an average of 5-8 visuotactile sensors are integrated into each humanoid robot, accounting for 30-40% of the total sensor complement. Downstream, the application of humanoid robots in industries such as manufacturing, medical rehabilitation, and scientific research is reflected, with the annual consumption of visuotactile sensors steadily increasing in line with market demand growth. Visuotactile Sensor for Humanoid Robot is an advanced perception device that integrates high-precision optical imaging and tactile sensing technologies, enabling the robot to capture and analyze subtle deformations of the contact surface in real-time. This sensor is capable of detecting the hardness and texture of objects, as well as perceiving minute changes in force and sliding tendency, thereby endowing humanoid robots with a touch sensitivity similar to that of humans. This enhances their precision and accuracy when performing complex tasks, improves the quality of interaction with the environment, and increases the flexibility and adaptability of operations.

The global Vision-Based Tactile Sensor for Robotics market size was estimated at USD 101.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 13.50% during the forecast period.
