Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Visualized Endotracheal Intubation competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. The visual tracheal intubation scope is an advanced medical device that integrates a camera and a display system. It is used to provide real-time, high-definition visual images during the tracheal intubation process, assisting doctors to visually observe the patient's throat, glottis and airway structure, thereby improving the accuracy and success rate of intubation. Compared with traditional blind intubation or direct viewing laryngoscopes, it significantly reduces the difficulty of operation and the risk of complications. It is particularly suitable for clinical scenarios such as difficult airway management, emergency intubation, anesthesia induction and intensive care. The device is widely used in anesthesiology, emergency department, ICU, pre-hospital emergency, military medical care and medical teaching, and is one of the important tools for modern airway management.

The global Visualized Endotracheal Intubation market size was estimated at USD 610.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.30% during the forecast period.
