Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Vitamin Acetate competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global vitamin acetate production reached 75k tons, with an average selling price of US\$35k per ton. Vitamin acetates are esterified derivatives of vitamins, with vitamin A acetate and vitamin E acetate being common. These are formed by combining vitamin molecules with acetic acid, resulting in enhanced stability and a longer shelf life. Vitamin acetates are commonly found in powder, oil, or granular forms, making them easy to incorporate into foods, health supplements, pharmaceuticals, and feed. Because they effectively resist damage from oxidation, light, and heat, they are widely used in dietary supplements, functional foods, animal nutrition, and cosmetics. For example, vitamin A acetate can improve vision and immune function, while vitamin E acetate possesses antioxidant, anti-aging, and cell membrane-protecting properties. Consequently, they hold significant application value in clinical practice, nutritional supplementation, and personal care products. The upstream of the vitamin acetate industry chain mainly relies on chemical raw materials such as acetic acid, isopropyl alcohol, and vitamin raw material intermediates. Core suppliers include BASF, DSM, etc., providing stable raw material guarantees; in the midstream, fine chemical and nutritional product manufacturers complete the esterification reaction, purification and formulation processes to produce pharmaceutical grade, feed grade and food additive grade vitamin acetate products; downstream, it is widely used in pharmaceutical companies (Pfizer, Bayer), feed mills (Cargill, Charoen Pokphand, New Holland), food, beverage and health product companies (Amway, Herbalife, Danone), etc., for nutritional supplements, animal premixes and functional foods, forming a complete application chain covering health, food and agriculture.

The global Vitamin Acetate market size was estimated at USD 2633.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.20% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Vitamin Acetate market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
