Report Overview

Vitamin B1 (thiamine mononitrate) is a synthetic, stable form of thiamine, a water-soluble essential vitamin crucial for carbohydrate metabolism, nerve function, and energy production. Unlike thiamine hydrochloride, the mononitrate variant is less hygroscopic, making it more suitable for fortification in dry products like flour, cereals, and dietary supplements. It is widely used in food and beverage fortification, pharmaceuticals (e.g., vitamin supplements and injectable solutions for deficiencies), and animal feed additives to prevent conditions like beriberi and Wernicke-Korsakoff syndrome. The market for thiamine mononitrate is driven by rising health awareness, regulatory mandates on food fortification in developing regions, and increasing demand for functional foods and nutraceuticals. However, competition from alternative forms (e.g., benfotiamine) and price volatility of raw materials may restrain growth. Geographically, Asia-Pacific dominates due to high deficiency rates and government initiatives, while North America and Europe see steady demand from supplements and processed foods. Key players focus on purity, bioavailability enhancements, and sustainable production to differentiate offerings.

The global Vitamin B1 Thiamine Mononitrate market size was estimated at USD 783.52 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.75% during the forecast period.
