## Abstracts

Vitamin feed additives are substances added to animal feed to supplement essential vitamins that may be lacking in their diet. Vitamins are organic compounds crucial for various biological functions, including growth, immune system support, and overall health. Since animals cannot synthesize all the vitamins they need, they rely on their diet to obtain these nutrients. In some cases, feed ingredients may not contain adequate vitamin levels, so feed additives are used to ensure balanced nutrition.

The global Vitamin Feed Additives market size was estimated at USD 558.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
