## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Vitex Trifolia Extract competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, the global production of Vitex trifolia extract was approximately 1,300 tons, with an average selling price of about US\$135 per kilogram. Production capacity in 2024 was 1,550 tons, with an average gross profit margin of approximately 20-30%. Vitex trifolia extract is extracted from the dried fruit of Vitex trifolia or Vitex negundo, a plant in the Verbenaceae family. Its main components include volatile oils, flavonoids, and alkaloids. It has the effects of dispersing wind-heat and clearing the head and eyes, and is clinically used to treat symptoms such as wind-heat headache and red, swollen, and painful eyes. The core upstream raw material for Vitex trifolia extract is the fruit of Vitex trifolia, a traditional Chinese medicine raw material that has been harvested, dried, and screened. Its downstream applications are mainly concentrated in two major industries: first, the health products and pharmaceutical industry, where it is used as an active ingredient to relieve eye fatigue, improve microcirculation, and in traditional prescriptions; second, the cosmetics and personal care industry, utilizing its antioxidant and anti-inflammatory properties as a functional additive in eye creams and soothing skincare products. Market demand is directly related to the trend of eye health consumption and the modernization of traditional Chinese medicine applications.

The global Vitex Trifolia Extract market size was estimated at USD 176.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
