Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on VOCs Gas Leak Detection Infrared Thermal Imager competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. A VOCs gas leak detection infrared thermal imager is a specialized device that uses infrared imaging technology to directly visually detect volatile organic compound (VOC) gas leaks. Its operating principle is based on the selective absorption of infrared radiation by specific gases in the infrared band (primarily the medium-wavelength 3-5 μ m). When the gas escapes in front of the camera, a unique smoke-like image is formed on the camera screen in real time, enabling precise location and investigation of the leak. In 2024, the global gas leak detection thermal imager market price was US\$71,500 per unit, with sales of approximately 8,272 units, an industry profit margin of 25-30%, and an average single-line production capacity of 100-300 units. The upstream core of the VOCs gas leak detection infrared thermal imager industry chain consists of optical components such as detectors, lenses, and chips; the midstream encompasses complete device R&D, manufacturing, and system integration; and the downstream is widely used in leak detection and safety management in fields such as petrochemicals and environmental monitoring, forming a comprehensive supply chain from core technology to end-use applications.

The global VOCs Gas Leak Detection Infrared Thermal Imager market size was estimated at USD 591.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
