Abstracts

A voltage suppressed overcurrent relay is a voltage restrained overcurrent relay. The relay measures impedance up to the point of fault and gives tripping command if this impedance is less than the relay setting Z . Increasing use of IEC 61850 standard in substation automation will be a major factor for market growth. The protective relay market is also driven by trends such as urbanization, accelerated industrialization, and technological advancements. The protection relay market will also grow due to increasing renewable energy capacity and rising safety awareness in the power industry. In addition, increasing product demand in numerous end-use segments and growing energy demand will have a significant impact on the development of the protective relay market. The increasing use of relay protection in power transmission and distribution network systems is a key factor slowing down the growth rate of the relay protection market. Replacing obsolete electromechanical and static relays with new digital relays will also significantly accelerate the growth rate of the market during the projected period. Moreover, expanding R&D efforts to enhance the safety and untapped potential of the relay protection market will create favorable conditions for market expansion. Furthermore, investments in smart grid infrastructure and rising demand for electricity will act as market drivers and foster new business possibilities throughout the forecast period.

The global Voltage Suppressed Overcurrent Relays market size was estimated at USD 2565.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.30% during the forecast period.
