Abstracts

Neonatal ventilators provide ventilatory support to preterm and critically ill infants who suffer from respiratory failure and who generally have low-compliance lungs, small tidal volumes, high airway resistance, and high respiratory rates. Volume-targeted ventilation (VTV) aims to produce a more stable tidal volume in order to reduce lung damage and stabilise the partial pressure of carbon dioxide (pCO₂). The medical ventilator market is experiencing significant growth due to the rising prevalence of respiratory diseases, advancements in technology, and the ongoing COVID-19 pandemic. Ventilators play a crucial role in providing respiratory support to patients with breathing difficulties. The market is driven by factors such as the increasing aging population, growing awareness about the importance of respiratory care, and the need for critical care facilities in hospitals. The demand for portable and homecare ventilators is also rising. Additionally, the COVID-19 pandemic has created a surge in demand for ventilators globally. Manufacturers are focusing on developing innovative and technologically advanced ventilators to meet the increasing requirements. The market is expected to continue growing as healthcare infrastructure improves, and the need for respiratory support continues to rise.

The global Volume Targeted Neonatal Ventilators market size was estimated at USD 57.9 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.30% during the forecast period.
