Report Overview

A volumetric feeder is a set-speed device that's dependent on a constant, choke-fed, or flooded infeed of a particulate solid, and it feeds by volume only. Volumetric feeders use an auger or screw conveyor running at a constant speed to discharge powder from a storage hopper at a consistent rate. Frequently, the hopper includes devices to condition the bulk material to ensure an even bulk density by using vibration, agitation, massaging or other means to eliminate air pockets and maintain flow.
