Abstracts

Volumetric video software refers to a specialized category of tools and platforms designed to capture, process, edit, and render three-dimensional representations of real-world objects, people, or environments, enabling the creation of immersive digital assets that can be viewed and interacted with from any angle in virtual, augmented, or mixed reality applications. Unlike traditional 2D or stereoscopic video, volumetric content is generated using techniques such as photogrammetry, depth-sensing cameras, or multi-camera rigs to reconstruct dynamic 3D models with spatial and temporal accuracy, making it particularly valuable for industries like entertainment, gaming, training simulations, and virtual events where realism and interactivity are paramount.
