Abstracts

The Vortex Grit Removal System is a mechanical wastewater treatment device designed to separate and remove heavy inorganic solids, such as sand, gravel, and other abrasive particles, from influent water streams using centrifugal force and gravitational settling principles; it typically consists of a cylindrical tank where wastewater enters tangentially, creating a vortex that forces denser grit particles outward and downward for collection while allowing lighter organic materials to exit through a central effluent launder, thereby protecting downstream equipment from abrasion, reducing pipe blockages, and improving the efficiency of subsequent treatment processes in municipal, industrial, and stormwater applications.

The global Vortex Grit Removal System market size was estimated at USD 245.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
