Abstracts

In 2024, the global actual ship deployment volume of Voyage Optimization Tool was approximately 18,500-21,000 vessels (covering ocean-going bulk carriers, tankers, container ships, gas carriers, and some deep-sea fishing fleets). The primary pricing model is "subscription-based (SaaS) + data access service," with a per-vessel cost generally ranging from \$540 to \$960 per month (depending on data frequency, weather field resolution, navigation optimization depth, and the use of CII/EEXI continuous assessment modules). The industry average gross profit margin is approximately 62%-74%. Voyage Optimization Tool is a real-time voyage optimization and compliant operation system based on weather-sea state forecasts, ship performance curve models, fuel consumption models (ME/AE/thrust curves), CII rating simulation, and optimal speed/route scheduling algorithms. Its core objective is to achieve a comprehensive path with the lowest fuel consumption, optimal carbon intensity, and minimal weather risk while meeting ETA (Estimated Time of Arrival) requirements. The core cost of this type of system is not hardware but rather the data source and model computation services. In the cost structure, meteorological and sea state forecast data (such as reanalysis data fields, wave perturbation ensemble models, and tidal current fields) account for approximately 38%-46%, ship behavior modeling (performance regression + CFD inversion parameter database) and global AIS data access account for approximately 28%-33%, and platform edge computing and cloud service nodes (AWS/Azure/GCP/Alibaba Cloud Maritime Cloud Zone) account for approximately 14%-21%. A typical system includes high-resolution weather and wave field data (0.1-0.25 grid), tidal current data, a ship hydrodynamic performance database, real-time AIS and engine data access, a strategy decision engine (DP/Speed-Profile Optimizer), a real-time cumulative CII score dashboard, and a voyage visualization interface. The typical data usage per ship is 8-28 GB/month (depending on data refresh frequency and satellite link type); deep-sea dry bulk/gas vessel fleets are typically

configured with broadband satellite links (Iridium Certus / Inmarsat Fleet Xpress / Starlink Maritime) to support dynamic updates.

The global Voyage Optimization Tool market size was estimated at USD 186.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.50% during the forecast period.
