Abstracts

VR lens has a unique optical design specially engineered for measuring near-eye displays (NEDs), such as those integrated into virtual (VR) headsets. The lens design simulates the size, position, and field of view of the human eye. Unlike alternative lens options, where the aperture is located inside the lens, the aperture of the VR lens is located on the front of the lens, enabling positioning of the imaging system's entrance pupil within NED headsets to view head-mounted displays (HMDs) at the same location as the human eye. Global key manufacturers of VR Lens include Goertek, Sunny Optical Technology, etc. These top two manufacturers hold a market share over 66%. China is the world's leading production region, with a market share of about 60 percent. In terms of application, the product is most widely used in gaming and entertainment, followed by retail and marketing.

The global VR Lens market size was estimated at USD 365.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 11.30% during the forecast period.
