Abstracts

Virtual reality omnidirectional treadmills are specialized locomotion devices designed to provide physical, unconstrained movement within virtual environments. These systems typically feature low-friction surfaces, harnesses, and motion-tracking technology that enable users to walk, run, crouch, or strafe in any direction while remaining in a fixed physical location, translating real-world motion into corresponding in-game or simulated movement. By addressing the challenge of limited physical space in VR applications, these treadmills enhance immersion, reduce motion sickness, and expand practical applications beyond entertainment into fields such as military training, rehabilitation, architectural walkthroughs, and professional simulation.

The global Vr Omnidirectional Treadmill market size was estimated at USD 125.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 15.75% during the forecast period.
