The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on VRFB Negative Electrolyte competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. VRFB negative electrolyte is the core component of all-vanadium liquid flow battery (VRFB). Its chemical nature is a sulfuric acid solution containing divalent (V²⁺) and trivalent (V³⁺) vanadium ions. During the charge and discharge process, the negative electrolyte achieves energy storage and release through the change of vanadium ion valence (V²⁺↔V³⁺). It has high safety, long life, scalability, and synergy with the positive electrolyte. It is used in grid-side energy storage, wind and solar distribution storage, industrial microgrids and backup power supply.

The global VRFB Negative Electrolyte market size was estimated at USD 414.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 12.20% during the forecast period.
