Abstracts

VSP Orthognathics Virtual Surgical Planning, namely Virtual Surgical Planning for orthognathic surgery, is a high - tech surgical planning method. It can help surgeons improve the accuracy of orthognathic surgery and achieve more ideal anatomical results. Working principle: First, send the patient's medical imaging data (produced by CT or CBCT technology) to 3D Systems to create a digital 3D model of the patient's anatomy. Then, through a web - based design session, biomedical engineers use 3D software to manipulate the digital model in real - time, analyze patient - specific anatomical discrepancies, simulate surgical osteotomies, perform bony movements, and assess potential surgical complications. Surgeons can also participate in the whole process, pre - plan the surgical process, and determine the best surgical plan.
