Abstracts

VTE (Venous Thromboembolism) preventive clothing, also known as compression garments or compression stockings, is specialized apparel designed to help prevent deep vein thrombosis (DVT) and other related conditions. VTE refers to blood clots that typically form in the deep veins of the legs and can potentially travel to the lungs, causing a pulmonary embolism. VTE preventive clothing applies graduated compression to the lower extremities, meaning the compression is strongest at the ankle and gradually decreases towards the thigh. This helps improve blood circulation and prevent the formation of blood clots by exerting gentle pressure on the legs. These garments are commonly recommended for individuals at high risk of developing blood clots, such as those who have undergone surgery, individuals with limited mobility, or individuals with a history of VTE. They may also be recommended for long-haul travelers, pregnant women, and individuals with certain medical conditions that increase clotting risks. VTE preventive clothing comes in different styles, including knee-high stockings, thigh-high stockings, and pantyhose. The global VTE preventive clothing market encompasses a range of compression garments designed to prevent venous thromboembolism (VTE) and related conditions. This market has seen growth due to increasing awareness of VTE risk factors, the prevalence of conditions such as deep vein thrombosis (DVT) and pulmonary embolism, and the utilization of compression garments as a preventive measure. Key market players in this space offer a variety of VTE preventive clothing, including compression stockings, socks, and hosiery designed to provide graduated compression to the lower limbs. These products cater to individuals at risk of VTE, including patients recovering from surgery, individuals with restricted mobility, pregnant women, frequent travelers, and those with a history of clotting disorders. Factors such as the aging population, rising incidences of chronic diseases, and increased emphasis on preventive healthcare have contributed to the expansion of the VTE preventive clothing market. Furthermore, technological advancements in garment design and materials, as

well as innovations in manufacturing processes, have led to the development of more comfortable, breathable, and effective compression garments, thereby driving market growth.

The global VTE Preventive Clothing market size was estimated at USD 1529.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.60% during the forecast period.
