Report Overview:

An unmanned aerial vehicle (UAV), commonly known as a drone, as an unmanned aircraft system (UAS), or by several other names, is an aircraft without a human pilot aboard. The flight of UAVs may operate with various degrees of autonomy: either under remote control by a human operator, or fully or intermittently autonomously, by onboard computers. Compared to manned aircraft, UAVs are often preferred for missions that are too 'dull, dirty or dangerous' for humans. They originated mostly in military applications, although their use is expanding in commercial, scientific, recreational, agricultural, and other applications, such as policing and surveillance, aerial photography, agriculture and drone racing.

VTOL UAV refers to Vertical Take-Off and Landing Unmanned Aerial Vehicle, one type of Drones. VTOL UAV categories include Multicopter, Helicopter and Hybrid.

The Global VTOL UAV Market Size was estimated at USD 2247.14 million in 2023 and is projected to reach USD 3706.87 million by 2029, exhibiting a CAGR of 8.70% during the forecast period.
