### Report Overview

Vulnerability management tools scan enterprise networks for weaknesses that may be exploited by would-be intruders. Should the scan find a weakness the vulnerability software suggests or initiates remediation action. In this way, vulnerability management software reduces the potential of a network attack. This approach to network security differs from firewalls, antivirus or antispyware software, and Intrusion Detection Systems (IDS). These security tools are designed to manage attacks on the network as they occur. In contrast, vulnerability management tools instead search for potential weaknesses and fix them in an attempt to mitigate potential future network attacks.

The global Vulnerability Management Solution market size was estimated at USD 4200.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 12.45% during the forecast period.
