Abstracts

Wafer Acceptance Testing (WAT) also known as Process Control Monitoring (PCM) data is data generated by the Fab at the end of manufacturing and generally made available to the fabless customer for every wafer. The data will typically have between forty and one hundred tests, each test having a result for each site (or “drop-in”) on the wafer. The sites are located so that the Fab can monitor the consistency of key parameters across the wafer. Within the Fab itself, there is a statistical process control system which uses this (and other) data to improve yield and reduce defects.

The global Wafer Acceptance Testing market size was estimated at USD 1155.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.10% during the forecast period.
