Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Wafer Batter Preparation Machine competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global wafer batter preparation machine production reached approximately 16418 units, with an average global market price of around US\$ 15000 per unit. Wafer batter preparation machine is a professional equipment for automatic production of batter for wafer, cone, ice cream cone and other foods. It ensures the stability of batter quality by accurately controlling the proportion and stirring process, which is a key link in food industrial production. The increase in demand for wafer batter preparation machine is mainly driven by the scale, automation transformation and rising labor costs of the baked goods industry, while the consumer's pursuit of product taste consistency and innovative flavors (such as low sugar, whole wheat) also drives the demand for precision mixing processes. The current business opportunities not only exist in the basic market where traditional equipment replaces manpower, but also lie in two high-value directions: one is to develop high-end models with intelligent temperature control, accurate feeding and data traceability functions to meet the extreme requirements of large-scale food factories for production standardization and efficiency; The second is to launch modular, easy-to-clean and small-batch customized flexible mixing solutions for small and medium-sized baking workshops, and build differentiated competitive advantages by providing process formula support and equipment maintenance services, so as to seize the lead in the expansion of leisure food and healthy diet market. The annual production capacity of a single wafer batter preparation machine is typically 2,000-3,000 units, with a gross profit margin of around 26%. Downstream consumption of wafer batter preparation machine includes 48% wafer biscuits, 24% wafer rolls, 18% wafer ice cream chips, and 10% other products.

The global Wafer Batter Preparation Machine market size was estimated at USD 246.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.00% during the forecast period.
