Abstracts

Wafer cutting surfactant is a concentrated, aqueous-based solution of wetting agents and surfactants that reduces heat build-up and move swarf particles away from the kerf during the saw dicing process. The global market for semiconductor was estimated at US\$ 579 billion in the year 2022, is projected to US\$ 790 billion by 2029, growing at a CAGR of 6% during the forecast period. Although some major categories are still double-digit year-over-year growth in 2022, led by Analog with 20.76%, Sensor with 16.31%, and Logic with 14.46% growth, Memory declined with 12.64% year over year. The microprocessor (MPU) and microcontroller (MCU) segments will experience stagnant growth due to weak shipments and investment in notebooks, computers, and standard desktops. In the current market scenario, the growing popularity of IoT-based electronics is stimulating the need for powerful processors and controllers. Hybrid MPUs and MCUs provide real-time embedded processing and control for the topmost IoT-based applications, resulting in significant market growth. The Analog IC segment is expected to grow gradually, while demand from the networking and communications industries is limited. Few of the emerging trends in the growing demand for Analog integrated circuits include signal conversion, automotive-specific Analog applications, and power management. They drive the growing demand for discrete power devices. Use a cutting surfactant to help prevent corrosion of the blade. By using surfactants in the cutting process, this helps the blade last longer and perform better when in use. Using a surfactant will help reduce the likelihood that the blade will fall out of service sooner rather than later. Preventing corrosion also means that manufacturers can use blades without worrying about corrosion affecting their products during use. The Asia Pacific region is the most important semiconductor component production hub in the world and is expected to remain so during the forecast period. The ever-expanding ingenuity of the government has firmly attracted the consciousness of global competitors to establish regional productive institutions. The region is a major

semiconductor manufacturer in the world, hence the demand for dicing surfactants is noteworthy. Most of these factories are expected to be the focus of attention in Japan and China, which is expected to open up better opportunities for dicing equipment in the long-term future. These factors contribute to the Asia Pacific region having the largest market share of cutting surfactants.

The global Wafer Cutting Surfactant market size was estimated at USD 7674.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.40% during the forecast period.
