Abstracts

Wafer expander is also called wafer expander separator. The wafer after dicing is expanded to increase the gap between independent dies, which is easy to be picked up and packed. After the stealth dicing, the modified layer inside the wafer is stretched by lifting and expanding actions, so that the wafer cracks along the modified layer, forming neat and controllable dicing cracks. DISCO, Ohmiya Industry and N-TEC Corp. are the top 3 players of Wafer Expander Separator, with about 70% market shares. Asia-Pacific is the largest market, has a share about 81%, followed by Europe and North America, with share 5% and 12%, separately. In terms of product type, semi-automatic is the largest segment, occupied for a share of 68%.
