Abstracts

Wafer Grinder (Wafer Thinning Equipment) uses a centrally located robot to move a wafer from an input station to a measuring station. Thereafter, the wafer is moved into a grind station and a wash station sequentially. The robot is able to move a wafer from the wash station to either the measuring station for after-grinding measurements or directly to an output station. During grinding of one wafer, a second wafer may be held between the measuring station and the grind station while a ground wafer is moved from the wash station to the measuring station for after-grinding measurements.

The global Wafer Grinder Wafer Thinning Equipment market size was estimated at USD 1039.71 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.10% during the forecast period.
