## Abstracts

Semiconductor wafer heaters are mainly used in CVD, Etch and other process links in the semiconductor wafer manufacturing process to provide consistent heat for silicon wafers to ensure process stability and uniformity. Depending on the material, they can be divided into metal heaters and aluminum nitride heaters. Wafer heaters (discs) are mainly divided into metals and ceramics. Metal prices are relatively more favorable than ceramics. The core companies include Durex Industries, Cast Aluminum Solutions (CAS), Tempco Electric Heater Corporation, Backer AB, MBE-Komponenten GmbH, Thermocoax, Marumae and TTS. The core companies of ceramic wafer heaters (discs) include Sumitomo Electric, Kyocera, NGK Insulators, Mico Ceramics, BACH Resistor Ceramics, Semixicon and CoorsTek, among which the share of TOP5 companies exceeds 68%. In terms of type, ceramic wafer heater companies are mainly distributed in Japan, and the market concentration of this segment is relatively high. Comparing the differences between metal and ceramic, each has its own advantages. The advantages of ceramic heaters are long life, high safety, and fast heating; while the advantages of metal heaters are reflected in price and high temperature resistance. However, in terms of application share, ceramic heaters are more widely used, with a market share of about 65%.

The global Wafer Heaters market size was estimated at USD 867.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.90% during the forecast period.
