### Report Overview

A wafer-level camera refers to a type of camera technology where the camera module is integrated directly onto a semiconductor wafer during the manufacturing process. It is also known as wafer-level optics or wafer-level imaging.

In traditional camera manufacturing, the camera module is typically assembled and attached to the circuit board separately. However, in a wafer-level camera, the camera module is built directly onto the wafer that contains the image sensor and other electronic components. This integration eliminates the need for a separate assembly process, reducing the overall size, weight, and cost of the camera module.
