### Report Overview

Wafer-level optics (WLO) enables the design and manufacture of miniaturized optics at the wafer level using advanced semiconductor-like techniques. The end product is cost effective, miniaturized optics that enable the reduced form factor of camera modules for mobile devices.

WLO wafer-level optical components refer to wafer-level lens manufacturing technology and processes. Different from the processing technology of traditional optical components, the WLO process uses semiconductor technology to copy and process lenses in batches on the entire glass wafer. Multiple lens wafers are pressed together and then cut into a single lens with small size and low height , Good consistency and other characteristics. The position accuracy between the optical lenses reaches the nm level, which is the best choice for standardized optical lens combinations in the future.
