Abstracts

A wafer packaging machine is a highly specialized piece of semiconductor manufacturing equipment used to encase and protect individual silicon wafers, which contain integrated circuits (ICs), into protective carriers or trays for safe handling, transportation, and storage during the assembly and testing phases. These machines automate the process of placing wafers into standardized containers, often using robotic arms, precision alignment systems, and environmental controls to minimize contamination, physical damage, or electrostatic discharge. The packaging process is critical for maintaining wafer integrity, ensuring yield rates, and enabling seamless integration into downstream processes such as dicing, die attachment, and final IC packaging, with machines varying in throughput, automation level, and compatibility with wafer sizes (e.g., 200mm, 300mm, or emerging larger formats).

The global Wafer Packaging Machine market size was estimated at USD 740.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
