## Abstracts

The source of the wafer recycling comes from the monitor wafers and the dummy wafers but not the defect wafers manufactured by the semiconductor fab. Semiconductor manufacturing requires delicate processing. So, equipment environment checks and tests are carried out frequently. Monitor wafers and dummy wafers, which could not qualify as prime wafers, are used for these tasks. Following such use, many of these wafers have their film removed using a chemical solution, and then are re-polished to a mirror finish. After that, these reclaimed wafers can once again be used to check equipment environment, or in equipment operation tests. Global key players of wafer recycling include RS Technologies, Kinik, Phoenix Silicon International, Hamada Rectech, Mimasu Semiconductor Industry, etc. The top five players hold a share over 74%. China Taiwan is the largest market, which has a share about 46%, followed by Japan and United States with a market share of 33% and 7%, respectively. In terms of product type, Dummy Wafers is the largest segment, occupied for a share of 78%. And in terms of application, IDM is the largest segment, which has a share about 70%.

The global Wafer Recycling market size was estimated at USD 696.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.80% during the forecast period.
