## Abstracts

Wafer used quartz boats are high-purity, custom-shaped fused quartz containers designed to securely hold and transport silicon wafers during high-temperature semiconductor manufacturing processes, such as diffusion, oxidation, annealing, and chemical vapor deposition (CVD). These boats must exhibit exceptional thermal stability, chemical inertness, low thermal expansion, and high resistance to thermal shock to prevent contamination, wafer slippage, or deformation under extreme conditions (often exceeding 1,000°C). Their precise slot designs ensure consistent spacing between wafers for uniform processing, while material purity—typically requiring >99.99% SiO<sub>2</sub> with minimal trace metals—is critical to maintaining wafer integrity and device yield.

The global Wafer Used Quartz Boat market size was estimated at USD 220.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
