Abstracts

A walk behind vacuum sweeper is a self-propelled or manually pushed cleaning device designed for large-scale debris collection on hard surfaces in commercial, industrial, and public settings. It operates by combining mechanical sweeping?using rotating brushes or brooms to dislodge and gather debris?with a powerful vacuum suction system that captures fine dust and particulate matter, depositing waste into an integrated hopper. These machines are engineered for efficiency, durability, and operator comfort, featuring ergonomic handles, adjustable brush heights, and often HEPA filtration systems to minimize airborne pollutants. They are distinct from residential vacuums or ride-on sweepers, targeting environments such as warehouses, factories, parking lots, and retail spaces where manual sweeping would be impractical or insufficient.

The global Walk Behind Vacuum Sweeper market size was estimated at USD 285.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 3.75% during the forecast period.
