Abstracts

Walk-On Rooflight is a structural glazing element designed to be installed flush with flooring surfaces, such as terraces, decks, or internal floors, allowing natural light to penetrate the spaces below while maintaining a usable walking surface above. Constructed from multiple layers of toughened and laminated glass, these rooflights are engineered to withstand pedestrian traffic and, in some cases, vehicular loads. They often feature anti-slip coatings or textured surfaces to ensure safety, and their frames are typically made from thermally broken aluminium to enhance energy efficiency. Walk-on rooflights serve both functional and aesthetic purposes, providing daylighting solutions without compromising floor space, and are suitable for residential, commercial, and public applications.
