Abstracts

The development trend for wall-mounted dental X-ray units is focused on improving technology, convenience, and patient safety. The shift from traditional film-based X-rays to digital imaging has been a significant trend in dental X-ray units. Digital X-rays offer higher image quality, faster processing times, and the ability to store and share images electronically. This technology also reduces radiation exposure for patients. CBCT is a specialized type of X-ray imaging that provides three-dimensional views of the patient's oral structures. It is particularly useful for dental implant planning, orthodontics, and endodontics. Wall-mounted X-ray units with CBCT capabilities are becoming more common in dental practices. Many modern wall-mounted dental X-ray units now offer wireless connectivity, allowing seamless integration with practice management software and electronic health records. This enables dentists to easily access and share patient X-rays, improving workflow efficiency.

The global Wall Mounted Dental X-ray Unit market size was estimated at USD 1124.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.50% during the forecast period.
