Abstracts

Wall-mounted fan coil units are a type of climate control system used for localized heating and cooling in residential, commercial, and hospitality settings, consisting of a heat exchanger (coil), a fan, and control components enclosed in a compact housing designed for mounting on walls, which operate by circulating air across the coil?where it is either heated by hot water or cooled by chilled water supplied from a central system?to maintain desired room temperatures efficiently and quietly. These units are often selected for their space-saving design, ease of installation, and ability to provide zonal comfort control without the need for extensive ductwork, making them a popular choice in multi-zone buildings such as hotels, apartments, and offices where individual room temperature regulation is prioritized.
