Abstracts

The wall-mounted intelligent grounding box is an intelligent grounding device used in power systems, communication systems and industrial facilities, designed to improve the safety and reliability of electrical systems. The device usually adopts a wall-mounted design, which is easy to install on the wall or next to the equipment, takes up little space, and is suitable for various indoor and outdoor environments. Its core function is to realize intelligent grounding protection of electrical circuits to prevent damage to systems and equipment caused by lightning strikes, overvoltage or grounding faults. The wall-mounted intelligent grounding box integrates advanced sensing, monitoring and control technologies, can monitor the grounding status in real time, and transmit data to the control center through the communication module to support remote management. Some products are also equipped with an alarm function. Once an abnormality occurs, such as excessive grounding resistance or grounding disconnection, an audible and visual alarm or remote notification will be triggered to provide timely information for maintenance personnel. For special application scenarios, there are also subdivided products such as lightning protection, high corrosion resistance and multi-functional types to meet the different needs of power, communication, rail transit and other fields.

The global Wall-Mounted Intelligent Grounding Box market size was estimated at USD 193.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 9.70% during the forecast period.
