## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Wall-mounted Network Rack Cabinet competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global sales of wall-mounted network rack cabinets reached 1.85 million units, with an average selling price of US\$145 per unit. Wall-mounted network rack cabinets are small metal structures used to house switches, routers, small servers, and low-voltage cabling equipment. They are typically manufactured using 1.2-2.0mm cold-rolled steel sheets or aluminum profiles and feature heat dissipation, cable management, dust protection, and equipment protection. Total production capacity is approximately 2.5 million units per year, with an average gross profit margin of approximately 18%-25%. Upstream raw materials mainly include cold-rolled steel sheets, aluminum profiles, tempered glass, and powder coatings, with steel accounting for about 70% of material consumption. Downstream demand primarily comes from low-voltage system integrators, telecommunications operators, building intelligence engineering contractors, and data center construction companies. Downstream consumption mainly consists of smart office applications, home NAS, security monitoring systems, and the expansion needs of small and medium-sized data centers. In terms of demand and business opportunities, with the increasing installation density of network equipment in SOHO scenarios, edge computing nodes, small security data centers, and smart buildings, wall-mounted network rack cabinets are showing stable incremental demand, especially in newly built buildings in Asia and the Middle East where demand is growing rapidly. Future prospects lie in lightweight aluminum cabinets, modular quick-installation structures, high-value-added cabinets with intelligent temperature control and IoT monitoring functions, and reinforced products that meet the heat dissipation requirements of high-density PoE switches. Companies that can

improve their flexible production lines and customization capabilities will gain greater market opportunities.

The global Wall-mounted Network Rack Cabinet market size was estimated at USD 286.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.80% during the forecast period.
