Report Overview:

Oil condensing boilers are water heaters fueled by oil. They achieve high efficiency (typically greater than 90% on the higher heating value) by condensing water vapour in the exhaust gases and so recovering its latent heat of vaporisation, which would otherwise have been wasted. This condensed vapour leaves the system in liquid form, via a drain. In many countries, the use of condensing boilers is compulsory or encouraged with financial incentives. A wall-mounted boiler refers to a boiler unit that is designed to be installed on a wall.

The Global Wall Mounted Oil Condensing Boiler Market Size was estimated at USD 126.25 million in 2023 and is projected to reach USD 144.70 million by 2029, exhibiting a CAGR of 2.30% during the forecast period.
