Abstracts

WAN Edge Infrastructure Software is a class of networking technology that enables connectivity to distributed IT resources, such as data centers, public clouds, and SaaS applications. It provides this connectivity through a combination of hardware and software that works to provide reliability, security, and efficiency to the network. WAN Edge Infrastructure Software typically includes features such as routing, firewall, SD-WAN, WAN optimization, and WAN path control. WAN Edge Infrastructure Software is often procured by senior networking leaders within an infrastructure and operations (I&O) organization. The industry trend of WAN Edge Infrastructure Software is driven by the needs of digital business transformation and the demands of line-of-business managers. The market is undergoing dramatic change as more enterprises adopt cloud-based applications and services, remote work models, and software-defined approaches to networking. The evolution of WAN edge infrastructure from hardware appliances to software platforms: Software platforms offer more flexibility, scalability, agility, and cost-effectiveness than hardware appliances. They also enable easier integration with other network functions and services. Gartner expects that by 2025, more than 50% of WAN edge infrastructure refresh initiatives will be based on vCPE or SASE platforms versus traditional routers. The increasing importance of analytics and automation for WAN edge infrastructure: Analytics and automation enable better visibility, control, optimization, and troubleshooting of WAN edge infrastructure. They also help improve user experience, application performance, network efficiency, and security posture. Gartner advises that I&O leaders should prioritize vendors that offer advanced analytics and automation capabilities for their WAN edge infrastructure solutions.

The global WAN Edge Infrastructure Software market size was estimated at USD 252.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of
