A warehouse pick station is a designated workstation within a warehouse or distribution center designed to streamline the order-picking process by improving efficiency, accuracy, and ergonomics. These stations serve as key points where workers or automated systems retrieve and organize products for order fulfillment. Depending on the level of automation, warehouse pick stations can range from manual setups, where employees pick items based on printed or digital instructions, to highly automated systems that use robotic arms, pick-to-light, voice picking, or goods-to-person (GTP) technology. They are commonly integrated with warehouse management systems (WMS) to optimize workflow, reduce picking errors, and increase order processing speed.
