Abstracts

Warm air heating systems function by drawing in cold air from a room, passing it over a heat exchanger warmed by a gas or electric source, and then distributing the heated air back into the space via ductwork and vents; these systems are valued for their rapid heating capabilities, energy efficiency in well-insulated environments, and space-saving design due to the absence of traditional radiators, though they are less common in new residential installations compared to forced-air systems with central air conditioning integration.

The global Warm Air Heating System market size was estimated at USD 6250.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 4.50% during the forecast period.
