Report Overview

Warm-Hot Forging Presses are industrial machines used in the metalworking industry for the process of forging metals within a specific temperature range that falls between traditional cold forging and hot forging. Forging is a manufacturing process in which a metal piece is shaped and formed by applying compressive forces through the use of a die or mold. The choice of temperature range in warm-hot forging allows for enhanced plasticity and deformability of the metal, resulting in improved material flow and the ability to create complex shapes and geometries.
