## Abstracts

A washer disinfector dryer is an automated medical-grade appliance designed to clean, disinfect, and dry reusable medical instruments, surgical tools, and laboratory equipment through a controlled, multi-stage process that typically includes pre-washing, washing with enzymatic or alkaline detergents, rinsing, thermal or chemical disinfection, and drying. These systems are essential in healthcare settings such as hospitals, dental clinics, and laboratories to ensure compliance with stringent infection control standards, reduce cross-contamination risks, and improve operational efficiency by automating reprocessing workflows that would otherwise require manual labor. The integration of validation features, traceability systems, and compatibility with various instrument types makes them a critical component of sterile services departments and central processing units.

The global Washer Disinfector Dryers market size was estimated at USD 1650.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 7.95% during the forecast period.
