### Report Overview:

Waste heat to power (WHP) is the process of capturing heat discarded by an existing industrial process and using that heat to generate power.

Energy intensive industrial processes—such as those occurring at refineries, steel mills, glass furnaces, and cement kilns—all release hot exhaust gases and waste streams that can be harnessed with well-established technologies to generate electricity (see Appendix). The recovery of industrial waste heat for power is a largely untapped type of combined heat and power (CHP), which is the use of a single fuel source to generate both thermal energy (heating or cooling) and electricity.

The Global Waste Heat to Power Market Size was estimated at USD 2412.19 million in 2023 and is projected to reach USD 3214.14 million by 2029, exhibiting a CAGR of 4.90% during the forecast period.
