Waste Paper Drum Pulper is a mechanical device used in the recycling process to break down waste paper into pulp. It consists of a large rotating drum where paper scraps, often mixed with water, are agitated to separate the fibers from contaminants like ink, glue, and plastics. This pulping system is particularly effective for processing recycled paper and is commonly used in paper mills to create new pulp for producing various paper products, such as newsprint, tissue, and packaging materials. The drum pulper ensures efficient fiber separation while minimizing damage to the fibers, resulting in high-quality recycled pulp.
