Abstracts

A waste plastic granulator is an industrial machine designed to process post-consumer or post-industrial plastic waste into uniform granules or pellets through a sequence of mechanical operations, including shredding, washing (if necessary), melting, extruding, and pelletizing. These granules serve as raw material for manufacturing new plastic products, enabling closed-loop recycling and reducing reliance on virgin plastic resins. The equipment is essential in plastic recycling value chains, converting heterogeneous plastic scrap?such as bottles, films, or rigid containers?into homogeneous, flowable feedstock suitable for reuse in injection molding, blow molding, or extrusion processes.

The global Waste Plastic Granulator market size was estimated at USD 1218.5 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 6.25% during the forecast period.

This report offers a comprehensive and in-depth analysis of the global Waste Plastic Granulator market, covering all critical facets from a broad macroeconomic overview to detailed micro-level insights.
