Abstracts

Waste to Energy (WtE) systems are technologies designed to convert municipal and industrial waste into usable forms of energy—typically electricity, heat, or fuel—through processes such as incineration, gasification, pyrolysis, anaerobic digestion, or landfill gas recovery. These systems aim to reduce the volume of waste sent to landfills while simultaneously generating energy, thus addressing both waste management challenges and energy demands in an integrated manner. The core objective is to extract value from waste streams by harnessing their calorific or biochemical potential, contributing to circular economy principles by turning refuse into a resource.

The global Waste To Energy Systems market size was estimated at USD 40500.0 million in 2024 and is projected to grow at a compound annual growth rate (CAGR) of 5.60% during the forecast period.
