## Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Water-based Binder for Lithium-ion Battery competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Water-based binders for lithium-ion batteries mainly include SBR (styrene-butadiene rubber), CMC (carboxymethyl cellulose), and PAA (polyacrylic acid), which are primarily used in the anode and increasingly applied to next-generation silicon-based electrodes. These binders replace traditional solvent-based PVDF systems by offering eco-friendly, cost-effective, and safer processing advantages, as they can be dispersed in water instead of toxic organic solvents. With good adhesion, flexibility, and compatibility, water-based binders help improve electrode stability, cycle life, and overall sustainability of lithium-ion battery manufacturing. In 2024, global water-based binder for lithium-ion battery production reached approximately 52.8 kilotons, with an average global market price of around US\$ 19 per kg. Downstream customers are battery manufacturers, and demand in power battery has the largest market share with the development of EV.

The global Water-based Binder for Lithium-ion Battery market size was estimated at USD 1106.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 14.20% during the forecast period.
